

STDocCapture

Smart, Secure, and Cost-Effective Document Processing

Are you looking to capture data from documents economically & efficiently?

Are you looking for a simple solution that is easy to deploy and maintain?

Are you seeking to leverage Artificial Intelligence and obtain a quick return on your investment in a document capture product?

Are you looking for metrics related to volumes, processing efficiency and operator performance?

Organizations handle large volumes of documents every day like **forms, records, invoices, and reports**. Manually extracting information from these documents is slow, error-prone, and costly.

Our **Intelligent Document Processing** platform uses AI algorithms to automatically capture and structure data from documents with high accuracy and speed. Designed for real-world operations, the system processes structured, semi-structured, and unstructured documents with equal efficiency.

Built on a **Secure, distributed architecture**, the platform ensures that all document images are always encrypted, keeping sensitive data protected at all times. The design minimizes centralized dependencies, improving reliability while reducing infrastructure and operational costs.

The solution is easy to deploy, simple to maintain, and quick to take into production. Built-in monitoring and detailed analytics provide clear visibility into processing volumes, system performance, and throughput.

Intelligent recovery mechanisms detect issues early, automatically handle failures, and generate alerts when attention is required.

Who will Benefit?

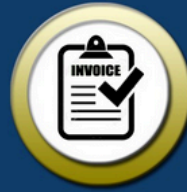

Healthcare Industry

Banking and Finance

Educational Institutes

Manufacturing & Distribution

Taxation

Document Processing Made Flexible

STDocCapture is designed to fit seamlessly into the way organizations work today. It can also operate as a secure Software-as-a-Service (SaaS) platform, allowing businesses to start quickly without complex setup or infrastructure investments.

Documents can be uploaded and processed through an intuitive web interface or integrated directly into existing systems using simple REST API calls. This flexibility makes it easy to automate document capture as part of everyday business workflows.

Use Cases

Case Study: FINANCIAL STATEMENTS

A variety of documents such as **Loan applications, KYC forms, bank statements, contracts, correspondence**, processed by various financial institutions find a need for capturing crucial metadata. STDocCapture makes digitization simple while providing data security, compliance and visibility into operational performance.

Financial Statements

Case Study: INSURANCE

There is heavy reliance on documents throughout the policy lifecycle in the form of **Proposal forms, Claims documents (medical bills, accident reports), Policy servicing requests** and many others.

STDocCapture reduces high operational costs, long turnaround times and frequent rework due to data inaccuracies.

Insurance

Case Study: INVOICES

The Accounts Payable (AP) team relies on inefficient manual data entry and very basic tools to process vendor invoices.

STDocCapture helps:

- Reduce high processing cost per invoice
- Eliminate mismatches with Purchase Orders
- Reduce delayed vendor payments and penalties
- Improve visibility into invoice status and bottlenecks
- Handle security concerns around invoice data handling
- Help reconciliation for Tax purposes

Invoices

Essentials

End to End Solution

A simple AI enabled Document Capture Solution

Secure Environment

Provides a secure environment for capture

Packaged Solutions

Implemented as packaged solutions called Projects

Multi Designers

Intuitive multi-function Designers used for solution configuration

Reduced Dev Time

Algorithms that reduce development time and improve accuracy

Reduced Data Entry

Data validation with Smart Key and Text Search feature

Analytics / Reports

Measures operator performance and system throughput

Document Archival

Integrates with any backend including STSafeInfoVault

About Stellaris

Stellaris Technologies is a software consulting and development company specializing in Document Capture and Input Management solutions since 2005, helping enterprises and system integrators automate and optimize data extraction, classification, and processing workflows for the last 20+ years.

Stellaris delivers a broad range of capture-focused solutions and accelerators, including tools for complex table extraction, workflow management, and automated processing, along with domain-specific packaged solutions. We emphasize on data security practices and robust support services for global customers.
